

ANNOUNCING THE GENERATION IV SHIPPING BOX

Over the past 25 years, we have modified our shipping boxes to better protect your equipment from damage in shipment. We are always looking for better ways to provide our customers with the safest and most simple shipping process we can find.

While our wooden boxes have been very successful in protecting your slides, we have recently learned of a UPS guideline suggesting at least 2 inches of packaging around the item being shipped. After considerable thought and investigation, we have designed a new cardboard box that will come with a 1½ inch thick block of Styrofoam under the wooden box and an additional block on top of the wooden box. If your slide arrives in the shop in one of the old style cardboard sleeves, your slide will be returned in the Gen. IV box at no additional charge.

All that you will need to do is to cut the plastic packing tape on the top of the box, lift the flaps, and then lift out the top block of Styrofoam and remove the wooden box. From that point on, everything will be the same, refer to the enclosed or attached “Box Instructions”.

Place the wooden box back in the cardboard box on top of the lower block of Styrofoam. Place the top block of Styrofoam on top of the wooden box, close the flaps and securely tape the top flaps. Using this box will be much easier than dealing with “peanuts.” You are now ready to ship the slide.
