

## INSTRUCTIONS FOR USING THIS BOX

There are three layers of foam. Each is  $\frac{1}{2}$  inch thick. Remove the top layer of foam. You will see that there is a small piece of foam at each end of the box in the middle level. Place the slide on these two small pieces of foam. Draw a tight line around the left hand grip and around the crook with a small marker.

Remove the slide and the two small pieces. Cut out the shape of the left hand grip and the crook from these small pieces. Better to make it fit too tight than too loose.

Place the slide on the lowest layer of foam and then place the two small pieces at either end. If the slide feels loose, and moves from side to side or end to end, cut some shims from the scrap foam removed. When the slide fits snugly, replace the top layer of foam. Be sure to include the "Admission Form" with your name, shipping address and email address, along with the signed "Credit Card Authorization Form" inside the wooden slide shipping box along with the slide. Any special instructions for return shipping should also be included. Secure the lid with the screws provided. Repack the wooden box in the reusable cardboard sleeve between the two bricks of Styrofoam. The sleeve can be used over and over. We will replace it if it is damaged in shipment.

The cost of the setup is \$225.00. The cost of the empty slide shipping box is \$30.00, plus the shipping cost. You will be emailed an Invoice after the empty slide shipping box is sent to you. Once the requested work has been performed, and your slide is on its way home, a credit or debit will be applied to your final invoice to account for the difference of the actual shipping cost of sending you the empty slide shipping box. We will accept payment by Visa, MasterCard, Discover, American Express, check, or PayPal. You can call in credit card information or complete the enclosed Credit Card Authorization Form. Do not email credit card numbers.
